Chapter 1

Thermo-Calc c-api

The main part of this manual is a technical description of the TC-API. To find details on the Thermodynamic applications of each library function see the section on [tcapi.h](#).

1.1 Installed files

In the distribution of Thermo-Calc c-api, the following folders and files can be found.

1.1.1 TC-API libraries.

These could be .lib, .dll, .so -files depending on your installation.
E.g. on a 64 bit Windows system you will find:
tcapi-win-x64-.dll and tcapi-win-x64-.lib

1.1.2 Source folder.

This is the c code for running the the different examples. Some of this code can be reused in user-written projects.

1.1.3 Project folders for building the example code

Linux:

-> Linux/Linux-Dynamic-Linking

-> Linux/Linux-Explicit-Loading

Windows:

-> Windows-Mingw32-Explicit-Loading

-> Windows-Studio-Project-Dynamic-Linking

-> Windows-Studio-Project-Explicit-Loading

1.2 Explicit loading or Dynamic linking

When using Dynamic Linking, the libraries (.so or .lib) and the header-files of the tcapi are needed when the program is being built.

When using Explicit Loading no libraries are needed for the build. They are loaded at runtime (.so or .dll).

1.3 About the source code

1.3.1 The dynamic linking examples use the files

Simple thermodynamic calculations to demonstrate the use of this api.

[example1.c](#)

[example2.c](#)

[example3.c](#)

Utility functions for finding the correct environment variables

[tcutils.c](#)

[tcutils.h](#)

Declarations and documentation on all TC-API functions

[tcapi.h](#)

Thermo-Calc proprietary declarations and definitions. DO NOT EDIT.

[tc_data_defs.h](#)

1.3.2 The explicit loading examples use the files

Utilities to simplify working with explicitly loaded dll.

[libtc.c](#)

[libtc.h](#)

Simple thermodynamic calculations to demonstrate the use of this api.

[tcExamples.c](#)

[tcExamples.h](#)

Main program to exemplify how this api can be used

[tcMain.c](#)

Utility functions for finding the correct environment variables

[tcutils.c](#)

[tcutils.h](#)

Thermo-Calc proprietary declarations and definitions. DO NOT EDIT.

[tc_data_defs.h](#)

1.4 When starting developing proprietary projects the following code is needed

1.4.1 The dynamic linking examples use the files

[tcapi.h](#)

[tc_data_defs.h](#)

1.4.2 The explicit loading examples use the files

[libtc.c](#)

[libtc.h](#)

[tc_data_defs.h](#)

([tcMain.c](#) can give an idea of how the above files can be used)

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

_tc_function_library	9
tc_components_strings	15
tc_conditions_as_arrays_of_strings	15
tc_constituents_strings	16
tc_databases_strings	16
tc_elements_strings	17
tc_phases_strings	17
tc_reference_strings	17
tc_species_strings	18

Chapter 3

File Index

3.1 File List

Here is a list of all files with brief descriptions:

example1.c	19
example2.c	19
example3.c	19
libtc.c	20
libtc.h	21
tc_data_defs.h	24
tcapi.h	29
tcExamples.c	36
tcExamples.h	37
tcMain.c	37
tcutils.c	38
tcutils.h	39

Chapter 4

Class Documentation

4.1 `_tc_function_library` Struct Reference

```
#include <libtc.h>
```

5.9.1 Function Documentation

5.9.1.1 void `tc_append_database` (`TC_STRING` name)

Appends the named database

5.9.1.2 `TC_BOOL` `tc_check_license` (`TC_STRING` name, `TC_STRING` message, `TC_STRING_LENGTH` strlen_message)

Returns true if the checked license is available and valid, currently accepts: `TC_DLL`, `TC_GUI` and `TC_TC4U`

5.9.1.3 `TC_STRING` `tc_component_status` (`TC_STRING` component_name)

Returns the status of "component_name" where status may be one of "ENTERED" or "SUSPENDED"

5.9.1.4 void `tc_compute_equilibrium` ()

Computes the equilibrium in POLY-3 using the currently set conditions

5.9.1.5 void `tc_create_new_equilibrium` (`TC_INT` equilibrium)

Creates a new equilibrium in POLY-3 with number "equilibrium number".

5.9.1.6 `TC_INT` `tc_database` (`TC_STRING` datan, `TC_INT` linelen)

Returns the number of databases in the system and their names in "datan"

5.9.1.7 void `tc_define_components` (`TC_STRING` component_name, `TC_INT` strlen, `TC_INT` number_of_components)

Redefines the components in the system to the components in "component_name".

5.9.1.8 `TC_INT` `tc_degrees_of_freedom` ()

Returns the degrees of freedom in the system. This must be zero in order to perform an equilibrium calculation.

5.9.1.9 void `tc_deinit` ()

5.9.1.10 void `tc_delete_condition` (`TC_STRING` condition)

Deletes the condition for the expression in "condition".

5.9.1.11 void `tc_delete_symbol` (*TC_STRING symbol*)

Deletes a symbol in the system.

5.9.1.12 *TC_INT* `tc_element` (*TC_STRING elements*, *TC_INT lincelen*)

Returns the number of elements in the database and their names in "elements"

5.9.1.13 void `tc_element_reject` (*TC_STRING element_name*)

Rejects "element_name" in the currently selected database.

5.9.1.14 void `tc_element_select` (*TC_STRING element_name*)

Selects "element_name" in the currently selected database.

5.9.1.15 void `tc_enter_ges5_parameter` (*TC_STRING parameter*, *TC_STRING expression*)

Enters a parameter expression

5.9.1.16 void `tc_enter_symbol` (*TC_STRING symbol*, *TC_STRING type*, *TC_INT argument_type*, *TC_INT integer_argument*, *TC_FLOAT double_argument*, *TC_STRING string_argument*)

Enters a symbol in the system, the symbol type may be one of "CONSTANT", "VARIABLE", "FUNCTION" or "TABLE", "argument_type" defines which of the following arguments will be used, 1 indicates the integer argument, 2 the double argument and 3 the string argument.

5.9.1.17 *TC_BOOL* `tc_error` (*TC_INT * error_number*, *TC_STRING message*, *TC_INT strlen*)

Returns true if an error has been set, returning the error number in "error_number" and its corresponding message in "message"

5.9.1.18 void `tc_ges5` (*TC_STRING command*)

Sends a command to the GES5 module as defined in the argument "command"

5.9.1.19 void `tc_get_data` ()

Executes the database command "GET_DATA"

5.9.1.20 void `tc_get_derivatives` (*TC_STRING phase_name*, *TC_FLOAT * arr1*, *TC_FLOAT * arr2*)

Returns Gm and the first derivatives with respect to site-fractions in "arr1" and the second derivatives in "arr2" as GM.Y1.Y1, GM.Y1.Y2, GM.Y2.Y2, GM.Y1.Y3, GM.Y2.Y3, GM.YN.YN

5.9.1.21 void `tc_get_ges5_parameter` (*TC_STRING parameter*, *TC_STRING expression*, *TC_INT strlenExpression*)

Retrieves the expression of a parameter name

5.9.1.22 TC_FLOAT tc_get_value (TC_STRING *symbol*)

Retrieves the symbol or state variable value from the POLY-3 module.

5.9.1.23 TC_INT tc_init_root ()

Initializes the Thermo-Calc system. This function (or tc_init_root3) must be called prior to anything else.

5.9.1.24 TC_INT tc_init_root3 (TC_STRING *tmppath*, TC_STRING *tcpath*)

Initializes the Thermo-Calc system. This function (or tc_init_root) must be called prior to anything else. *tmppath* Path to directory for log file *tcpath* Path to Thermo-Calc installation (Used to find databases)

5.9.1.25 TC_INT tc_list_component (TC_STRING *component_name*, TC_INT *strlen*)

Returns the number of components in the system and their names in "*component_name*".

5.9.1.26 TC_INT tc_list_conditions (TC_STRING *conditions*, TC_INT *strlen*)

Returns the number of conditions set and their values in "*conditions*".

5.9.1.27 TC_INT tc_list_phase (TC_STRING *phase_name*, TC_INT *strlen*)

Returns the number of phases in the system and their names in "*phase_name*".

5.9.1.28 TC_INT tc_list_species (TC_STRING *species_name*, TC_INT *strlen*)

Returns the number of species in the system and their names in "*species_name*".

5.9.1.29 TC_INT tc_list_symbols (TC_STRING *symbols*, TC_INT *strlen*, TC_INT * *type*)

Returns the number of defined symbols in the system with their expression and value in "*symbols*" and their corresponding type in "*type of symbol*", where the type may be one of 1="CONSTANT", 2="VARIABLE" 3="FUNCTION" 4="TABLE"

5.9.1.30 TC_INT tc_nr_of_constituents_in_phase (TC_STRING *phase_name*)**5.9.1.31 void tc_open_database (TC_STRING *name*)**

Opens the named database "*name_of_database*".

5.9.1.32 TC_INT tc_phase (TC_STRING *phases*, TC_INT *linelen*)

Returns the number of phases in the system with the selected elements. NOTE: the routine returns the number of all available phases.

5.9.1.33 `TC_INT tc_phase_all_constituents (TC_STRING phase_name, TC_INT * constituent_array, TC_STRING element_array, TC_INT strLenElem, TC_FLOAT * number_of_sites)`

Returns the number of sublattices in the phase (including phases with the status SUSPENDED), the number of constituents on each sublattice in "constituent_array", the name of the selected species on each sublattice one after each other in "element_array" and the "number_of_sites" on each sublattice.

5.9.1.34 `TC_INT tc_phase_constituents (TC_STRING phase_name, TC_INT * constituent_array, TC_STRING element_array, TC_INT strLenElem, TC_FLOAT * number_of_sites)`

Returns the number of sublattices in the phase, the number of constituents on each sublattice in "constituent_array", the name of the selected species on each sublattice one after each other in "element_array" and the "number of sites" on each sublattice.

5.9.1.35 `void tc_phase_reject (TC_STRING phase_name)`

Rejects the phase in "phase_name"

5.9.1.36 `void tc_phase_select (TC_STRING phase_name)`

Selects the phase in "phase_name"

5.9.1.37 `TC_STRING tc_phase_status (TC_STRING phase_name)`

Returns the status of "phase_name" where status may be one of "FIXED", "SUSPENDED" or "ENTERED"

5.9.1.38 `TC_INT tc_phase_structure (TC_STRING phase_name, TC_INT * constituent_array, TC_STRING species_array, TC_STRING_LENGTH strLenSpecies, TC_FLOAT * number_of_sites)`

Returns the number of sublattices in the phase, the number of constituents on each sublattice in "constituent_array", the name of the species on each sublattice one after each other in "species_array" and the number of sites in "number of sites".

5.9.1.39 `void tc_poly3 (TC_STRING command)`

Sends a command to POLY-3 module as defined in the argument "command"

5.9.1.40 `void tc_put_sitefractions (TC_STRING phase_name, TC_FLOAT * sfarr)`

5.9.1.41 `void tc_read_poly3_file (TC_STRING filename)`

Loads the workspace from file "filename" in POLY-3.

5.9.1.42 `void tc_reject_constituent (TC_STRING phase_name, TC_INT sublattice, TC_STRING constituent)`

Rejects the constituent "constituent" on sublattice "sublattice" from phase "phase_name".

5.9.1.43 `void tc_reset_error ()`

Resets the error if an error has been set

5.9.1.44 void tc_restore_constituent (TC_STRING *phase_name*, TC_INT *sublattice*, TC_STRING *constituent*)

Restores the constituent "constituent" on sublattice "sublattice" from phase "phase_name".

5.9.1.45 void tc_save_poly3_file (TC_STRING *filename*)

Stores/overwrites the current workspace in POLY-3 on the file "filename".

5.9.1.46 void tc_select_equilibrium (TC_INT *equilibrium*)

Selects an equilibrium in POLY-3 with number "equilibrium".

5.9.1.47 void tc_set_component_status (TC_STRING *component_name*, TC_STRING *status*)

Sets the status of "component_name" to "status" to one of "ENTERED" or "SUSPENDED"

5.9.1.48 void tc_set_condition (TC_STRING *condition*, TC_FLOAT *value*)

Sets a condition for the expression in "condition" to value in "value".

5.9.1.49 void tc_set_license_code (TC_INT *code*)

5.9.1.50 void tc_set_minimization_option (TC_INT * *global_flag*, TC_INT * *max_gridpoints*, TC_INT * *frequency*,
TC_INT * *mesh_flag*)

Sets parameters for global minimization

5.9.1.51 void tc_set_phase_addition (TC_STRING *phase_name*, TC_FLOAT *addition*)

Sets the addition "addition" to the Gibbs

5.9.1.52 void tc_set_phase_status (TC_STRING *phase_name*, TC_STRING *status*, TC_FLOAT *value*)

Sets the status of "phase_name" to "status" to one of "FIXED", "SUSPENDED", "DORMANT" or "ENTERED".

5.9.1.53 void tc_set_start_value (TC_STRING *state_variable*, TC_FLOAT *starting_value*)

Sets a starting value for the "state_variable" to "start_value".

5.9.1.54 TC_STRING tc_species_status (TC_STRING *species_name*)

Returns the status of "species_name" where status may be one of "ENTERED" or "SUSPENDED"

5.9.1.55 void tc_version (TC_STRING *str*, TC_INT *str_len*)

Returns the version of Thermo-Calc in "str"
